PROFESSIONAL PROJECTS

Project 1 : Spartan – Salesforce

Role : Salesforce Developer

Description:

- ✓ Spartan is a financial service platform focused on providing a clients with investment management solutions. The project involves customizing Salesforce to streamline business processes, enhance client interactions, and automate financial operations.
- ✓ The system supports the tracking of investment portfolios, automated reminders, and various financial operations for enhanced customer satisfaction and operational efficiency.

Responsibilities:

- ✓ Develop and implement Apex classes and triggers to meet business requirements for automation and data processing.
- ✓ Design and implement batch jobs for large-scale data operations and ensure system performance.
- ✓ Create and manage Salesforce flows to automate reminder emails and investment notifications.
- ✓ Perform system testing, debug issues, and provide continuous support for Salesforce platform enhancements.

Project 2 : GoPrac Website (<https://goprac.com/>)

Role : Full Stack Developer

Description:

- ✓ GoPrac is an online practice platform where candidates can improve their interview skills by practicing one-on-one mock interviews offered by industry professionals.
- ✓ This platform simulates a real-time interview experience by providing a video-based interface to the candidate. Candidates can practice mock interviews anytime from anywhere.

Responsibilities:

- ✓ Creating and Implementing new UI features to the software.
- ✓ Worked with database for query optimization and process improvement.
- ✓ Supported Index software development and testing processes.
- ✓ Creating PHP and Node Js Rest API and handling Json data responses.
